

Download Active Directory Lab Manual

The code above will validate the issuer, audience, and the signing tokens of the access token, which is usually sufficient for most scenarios. But often the developer's requirements are more than what these defaults provide. Examples of these requirements can be: Restricting the Web API to one or ...Azure Sample: How to manually process a JWT access token in a web API using the JSON Web Token Handler For the Microsoft .Net Framework 4.5. Summary: This handout will explain the difference between active and passive voice in writing. It gives examples of both, and shows how to turn a passive sentence into an active one. Try Microsoft Azure Active Directory Domain Services for virtual machines and directory-aware applications. View pricing and get started for free.
