Please stop in anytime for a free estimate on a remote car starter for your standard shift vehicle. Remote car starters are relatively simple devices, but safely installing one in a car that has a manual transmission presents some unique problems. The issue is that most manual transmissions use mechanical shift linkage, and there's no sensor to tap into to tell if the transmission is in neutral. In addition, the manual transmission remote start is also available in a car alarm remote start combo package. The manual transmission remote start is set up to prevent unwanted or accidental starting with the transmission in gear. As far as I know there are just only some manufacturers who produce remote car starters for manual transmission. The main problem is the lack of "intellectual connection" between remote module and the starter. If we take, for example, old and vintage Chevrolet Impala and such type of module to provide that connection, no way we could do that.
